Subject: Gulfco task order - request for verifying that non-detects had been screened out.

In re: to the task order on Gulfco - analysis of sampling results matched with generator documents.

The team needs to know: Did GRB screen out the 'non-detects?' Re: to the Client-Contact tab of the spreadsheet. How did they run the screen and what criteria did they use to select the samples as noted in the column titled: "# Samples / Material"?

Gary Miller noted that the following sampling results should have been filtered out for this analysis:

Filter out the following sampling results:

Laboratory_Qualifier \neq U

Result < Sample_Quantitation_Limit

Result_Type_Code \neq SVR

Sample ID \neq LCSD*

Sample ID ≠ MB*

Sample ID ≠ * MS

Sample ID ≠ * MSD

Please have GRB contact Gary if there are any questions on the filters, above.
